EDUCATION

Carnegie Mellon University
Ph.D., Computer Science Department
Advisor: Christos Faloutsos

Pittsburgh, PA
Aug 2021 - May 2025

WORK
EXPERIENCE

Amazon Web Services
Applied Scientist

Santa Clara, CA
June 2025 - Present

- **Automated Data Improvement:** Initiated and spearheaded the cross-functional deployment of a data improvement pipeline driven by automated error analysis. Partnered with PMs and engineering teams to productionize the system, driving a 22% performance improvement in the final fine-tuned model with improved data.
- **Self-Evolving Prompt Optimization Agent:** Devised an MCTS-based agent to resolve manual iteration bottlenecks. Pioneered structural dimensionality reduction by modeling meta-prompts as permutation-invariant instruction sets to bound the search space, outperforming human baselines by 25% and slashing token costs by 61%.
- **Multi-Agent Optimization Orchestration:** Built a generalized framework that orchestrates parallel agents to optimize objectives, eliminating the need for task-specific pipelines. Applied meta-memory and test-time scaling to optimize an LLM for translation, closing 50% of the performance gap to the best-performing LLM baseline.
- **Scalable Shadow Testing Framework:** Architected a lightweight template matching pipeline to enable cost-effective shadow testing for an LLM service. Replaced expensive evaluation methods, successfully safeguarding production deployments while boosting relative success rates by 90% and reducing compute costs by 3x.
- **Multi-Objective Prompt Optimization:** Identified fundamental limitations in the team’s baseline approach. Architected and deployed a structural overhaul to resolve prompt content interference, successfully co-optimizing complex objectives to unlock simultaneous relative gains of 11.5% and 12.3% for a flagship product.
- **Research Mentorship:** Conceived and pioneered an efficient LLM reasoning research, personally building an oracle PoC that matched extended models with 80% fewer tokens. Currently directing an intern to scale this via fine-tuning. Previously co-mentored an intern on Text-to-SQL RL agents, yielding an ACL 2026 publication.

Bay Area, CA
May - Aug

- **2024:** Developed *HybGRAG*, an agentic framework combining retrieval in text databases and knowledge graphs, improving top-1 retrieval accuracy by 51% while reducing API calls by 97%; accepted to ACL 2025 Main.
- **2023:** Developed *NetInfoF*, a training-free framework for measuring and exploiting usable graph information, outperforming GNN baselines on 11 of 12 link-prediction tasks; selected as an ICLR 2024 Spotlight.
- **2022:** Identified a systemic server-side time-series anomaly affecting all core services and developed a mitigation strategy to address recurring system failures.
